

MicroSCALEMASTER® descaling nozzles

Series 622

The MicroSCALEMASTER® is the next logical step toward closer nozzle spacing and shorter stand-off distance. It offers the possibility of nozzle spacing of only 1.18" (30 mm) while minimizing the "Swiss cheese effect," i.e. perforating headers with close pitches. Even at that spacing, there is still a sufficient root gap between the holes. The result is a header that can be as close as 2" (50 mm) to the strip for exceptional descaling efficiency with very low flow rates.

Moreover, the small profile of the nozzle base allows for complicated header configurations to descale odd shaped sections and forgings. The stabilizer is almost flush with the back of the base, so it does not require additional clearance within the header. It is even possible to use pipes with reduced diameters and wall thickness due to the small holes involved. These allow you the possibility to mount headers in spaces that would not be practical even with the MiniSCALEMASTER®.

The physical size of the tip limits it to small capacities, but with the efficiencies gained by optimal header and nozzle placement, even low capacity nozzles have the ability to be highly effective.

Product Codes for Ordering				Mat. Code	Minimum Free Passage (in.)	Flow Rate (Gallons Per Minute)

MicroSCALEMASTER® bases, caps and accessories	
Part No.	Description
Bases	
062. 210. 17. 02	Weld Base, 35 mm long
Stabilizers	
062. 250. 30. 00	With Strainer, 35 mm long
Gasket	
095. 015. 1C. 07. 08	Stainless Steel Tip Gasket
Cap	
062. 200. 11. 02	Standard Tip Retainer Cap
Mounting & Assembly Accessories	
062. 290. 01. 00	Alignment Tip, Right Hand
062. 290. 01. 01	Alignment Tip, Left Hand
062. 290. 01. 02	Alignment Tip, Center
095. 009. 00. 13. 77	Disassembly Tool & Tip Extractor Assembly
